

KNOWLEDGE BASE: COMMUNITY-POWERED PROTOCOL AND DISCUSSION PLATFORM

DOCUMENT TYPE:

Platform Knowledge Base

PURPOSE:

This platform is a community-powered knowledge and discussion platform designed to allow users to publish protocols, discuss protocols, provide reviews, vote on useful content, and discover knowledge through search.

The platform combines protocol publishing with Reddit-like community discussions. Protocols represent structured knowledge or procedures. Threads represent discussions about protocols. Comments allow users to participate in conversations. Reviews provide experience-based evaluations. Votes help the community identify useful and credible content.

1. PLATFORM OVERVIEW

The platform allows users to create, discover, evaluate, and discuss community-contributed protocols.

A protocol is the primary knowledge object in the platform. Users can publish protocols that contain useful information, procedures, recommendations, or community knowledge.

Users can create threads associated with protocols to ask questions, share experiences, discuss implementation details, or provide additional information.

Users can comment on threads and reply to existing comments to create nested conversations.

Users can submit reviews to evaluate protocols based on their personal experience.

Users can upvote protocols, threads, and comments to increase the visibility of useful community content.

The platform provides search functionality to help users find relevant protocols and discussions using keywords, tags, filters, and sorting.

The system maintains relationships between users, protocols, threads, comments, reviews, and votes.

2. CORE PLATFORM CONCEPTS

USER

A user is a registered community member who can create and interact with platform content.

Users can:

- Create protocols.
- View protocols.
- Edit their own protocols.
- Delete their own protocols.
- Search protocols.
- Upvote protocols.
- Remove their protocol vote.
- Create threads.
- View threads.
- Edit their own threads.
- Delete their own threads.
- Upvote threads.
- Remove their thread vote.
- Add comments.
- Reply to comments.
- Edit their own comments.
- Delete their own comments.
- Upvote comments.
- Remove their comment vote.
- Submit reviews.
- View reviews.
- Edit their own reviews.
- Delete their own reviews.

Users can only modify or delete content they own.

3. USER FUNCTIONAL REQUIREMENTS

PROTOCOL MANAGEMENT

Create Protocol:

The user can publish a protocol that becomes visible to the community for review, discussion, and voting.

View Protocols:

The user can browse protocols to discover community-contributed knowledge.

Edit Own Protocol:

The user can update a protocol they created to keep the information accurate and relevant.

Delete Own Protocol:

The user can remove a protocol they created.

Search Protocols:

The user can search protocols using keywords, tags, filters, and sorting options.

PROTOCOL VOTING

Upvote Protocol:

The user can upvote a protocol. The vote increases the protocol's score and can improve its visibility.

Remove Protocol Vote:

The user can remove their previous vote. The protocol score is updated accordingly.

THREAD MANAGEMENT

Create Thread:

The user can start a discussion related to a specific protocol.

View Threads:

The user can read discussions associated with a protocol.

Edit Own Thread:

The user can update a thread they created.

Delete Own Thread:

The user can remove a thread they created.

THREAD VOTING

Upvote Thread:

The user can upvote a helpful discussion.

Remove Thread Vote:

The user can remove their previous thread vote.

COMMENT MANAGEMENT

Add Comment:

The user can participate in a thread by adding feedback, questions, answers, or additional information.

Reply to Comment:

The user can respond to another comment.

Edit Own Comment:

The user can modify a comment they created.

Delete Own Comment:

The user can remove a comment they created.

COMMENT VOTING

Upvote Comment:

The user can upvote a valuable comment.

Remove Comment Vote:

The user can remove their previous comment vote.

REVIEW MANAGEMENT

Submit Review:

The user can rate and provide feedback about a protocol based on personal experience.

View Reviews:

The user can view community reviews associated with a protocol.

Edit Own Review:

The user can update a review they previously submitted.

Delete Own Review:

The user can remove a review they previously submitted.

4. KNOWLEDGE DISCOVERY

The primary purpose of the platform is community-powered knowledge discovery.

Users discover knowledge through:

- Protocol search
- Protocol browsing
- Tags
- Filters
- Sorting
- Community votes
- Reviews
- Discussion threads
- Comments
- Nested replies

A high-value protocol can be supported by multiple discussions, reviews, and comments.

This creates a knowledge structure where the protocol contains the primary knowledge and community interactions provide additional context.
